About Me

I work at the intersection of **applied economics, data science, and public policy evaluation**.

My research focuses on how information, regulation, and spatial structures shape firm behavior and regional development through geoeconomic analysis. Currently, I coordinate data infrastructure and analytics projects that connect Brazilian administrative microdata (e.g., RAIS, CAGED, CNPJ) with spatial analysis for economic monitoring in Espírito Santo, Brazil.

In short: *I study how data reveals socioeconomic dynamics that public policies often overlook.*
